

## **Feline Behavior Problems: House Soiling**

House soiling is the most common behavior problem reported by cat owners. It includes urination and/or defecation outside the litter box, as well as urine spraying.

### **Why do cats eliminate outside of the litter box?**

One common misconception is that cats soil in inappropriate places for revenge. It is tempting to conclude, "He defecated on the living room carpet to punish me for leaving him for the weekend." But this kind of calculation requires sophisticated cognitive abilities that cats aren't believed to possess. Furthermore, this conclusion assumes that cats view their urine and feces as distasteful, when in fact they do not. It is only we humans who view it that way.

### **Medical Problems**

So why do cats urinate or defecate on your bed or carpet? Medical problems are one possibility. Inflammation of the urinary tract may cause painful or frequent urination, inability to urinate, bloody urine, and crying during urination. An affected cat is likely to eliminate outside the litter box if he comes to associate the box with painful urination, or if he has an increased urgency to urinate. In addition, kidney, liver, and thyroid diseases often lead to increased drinking and urination. Inflammation of the colon or rectum, intestinal tract tumors, intestinal parasites, and other gastrointestinal conditions may cause painful defecation, increased frequency or urgency to defecate, and decreased control of defecation. Age-related diseases that interfere with a cat's mobility (for example, arthritis, nervous system disorders, or muscular diseases), or with his cognitive functions can also influence his ability to get to the litter box in time. In short, any medical condition that interferes with a cat's normal elimination behavior can lead to house soiling.

### **Litter Box Aversions**

Behavioral problems, such as litter box aversions, inappropriate site preferences, or urine spraying can also lead to house soiling. An aversion implies that there is something about the litter box that your cat finds unsavory. It could be the box, the litter, the location of the box, or all three.

*Something about the litter box bothers your cat.*

- The box contains harsh odors. The litter box may have an offensive odor if you clean it with harsh chemicals such as bleach or PineSol. Or, if you don't clean it enough, the box may smell strongly of ammonia (a normal byproduct of urine). In either case, covered litter boxes hold in and amplify such odors.

- The sides of the box are too high or the box is covered. Cats with painful legs, sore joints, or other mobility problems may have trouble getting into a box with high sides. Kittens have similar problems.

*Something about the litter bothers your cat.*

- The litter is dirty. Cats usually prefer clean litter. Scoop litter daily and clean out weekly.
- The texture of the litter is distasteful. Your cat may have a preference for finer-textured clumping litter over coarser non-clumping litter—or vice versa.
- The scent of the litter is unpleasant. Most cats prefer non-scented litter.

*The location of the litter box bothers your cat.*

- The box is in an unpleasant area. Avoid placing the litter box in a high-traffic, noisy, dark, or dank area.
- Your cat is afraid to use the box. If another cat, dog, or human terrorizes your cat when she's in the box, or ambushes her as she exits, she may avoid the box altogether.

Cats with aversions usually eliminate on varying surfaces. You may find puddles of urine and/or feces on either soft surfaces like carpets, beds, or clothing, or on hard, shiny surfaces like tile floors or bathtubs. Depending on the severity of your cat's aversion, he may continue to use the litter box, but only inconsistently.

### **Inappropriate Site Preferences**

Alternatively, your cat may develop a preference for eliminating in a spot other than the box. Preferences can be categorized as follows:

- Another surface is more desirable for elimination. Cats that prefer certain surfaces usually stick with that choice. For example, a cat that finds it more pleasing to eliminate on soft surfaces like clothing or carpets would be unlikely to use tile floors.
- Another location is more desirable for elimination. This usually results from an aversion to the current box location.

As with aversions, cats with preferences for certain surfaces or locations may continue to use the litter box inconsistently. One cause for house soiling may lead to another. For example, a cat with a urinary tract disorder that can't make it to the litter box in time will urinate wherever she is. She may then develop a preference for the new site and continue to eliminate there.

### **Urine Spraying**

When your cat rubs against your leg with his face, or scratches his scratching post, he is also

depositing his scent from the glands in his cheeks and paws. Another equally normal but less pleasant marking behavior is urine spraying--the deposition of small amounts of urine around a given area. Spraying announces a cat's presence, establishes or maintains territorial boundaries, and advertises sexual availability.

Cats usually spray on vertical surfaces, like the backs of chairs, or walls. They don't squat to spray (as they do to urinate), but the tail lifts and quivers, and small puddles of urine are left in several consistent locations. Cats that spray are usually unneutered males and, to a lesser extent, unsprayed females, but 10% of neutered males and 5% of neutered females also spray. In households with more than seven cats, the likelihood of spraying is high.

Cats may spray when they perceive a threat to their territory, such as when a new cat enters the home, or when outside cats are nearby. New furniture and carpet smells can prompt spraying as well. Cats may also spray out of frustration resulting from factors—like restrictive diets, or insufficient playtime—often wrongly perceived by humans as revenge.

### **My cat is not using the litter box reliably. What should I do?**

First, address the problem promptly. The longer the behavior persists, the more likely it is to become habit. If you have more than one cat, you may need to separate them until you can identify the responsible party. Alternatively, your veterinarian can provide you with a special non-toxic stain given by mouth that will show up in the urine. In cases of defecation outside the box, you can feed one cat small pieces (about twice the size of a sesame seed) of a brightly colored non-toxic child's crayon that will show up in the feces. If you find urine puddles in the house, it is important to distinguish between spraying and other forms of house soiling. Watch your cat for signs of spraying—or set up a video camera when you're not around.

Once you have identified the house-soiling cat, it is wise to take him to your veterinarian for a thorough physical examination and appropriate diagnostic tests to see if there are underlying medical problems. Cats with medical conditions may not always act sick. Once medical causes have been ruled out, your detective work begins. Here are some patterns that may point to a cause:

- Is there one type of surface upon which your cat eliminates? If so, she may have a preference for certain surfaces, and you can modify your litter to match it. If she likes soft surfaces like carpeting, buy a softer, finer litter, and put a carpet remnant in her box. If she has a penchant for smooth, shiny surfaces, consider putting tiles in her box, covered with only a small amount of litter. Over time more litter can be added.
- Is there a certain location she prefers? She may have developed a preference for a new area because something bothered her about the old area. Try placing a litter box in her "preferred" location. Once she reliably uses it, gradually move the box just a few inches a day back to the desired location. Stop moving the box if she stops using it; instead simply move it back to the spot where she last reliably used it, then gradually begin moving it again.

- Is yours a multi-pet household where another animal terrorizes your cat while she's in the litter box or as she exits? If so, the cat may be afraid to use the box. If you currently use a covered box, replace it with one that gives her a 360-degree view. This will give her more confidence while she's in the box and make her less prone to ambush. Also, position the box so that she has more than one way out (i.e. don't have the box surrounded on three sides). Finally, place multiple boxes in multiple locations to give your cat more options.
- When your cat uses the box, does he cry, refuse to bury his waste, perch on the edge of the box without touching the litter, or eliminate right near the box?
- If your litter box is covered, cut a hole in the top so your cat can stick his head out.
- Your cat may dislike the litter you use, especially if you've recently and suddenly changed brands. If you must switch brands, do so gradually, adding more of the new litter to the old with each cleaning. Most cats prefer their litter unscented, and an inch or two deep.

The box itself may be the offender. Larger cats need bigger boxes, and kittens and elderly cats need boxes with low sides. Although humans like covered boxes for reducing odor and stray litter, from your cat's point of view, covers hold odors in, and restrict his view of the area. You may need to purchase several types of boxes and several types of litter to determine which combination your cat likes best. Finally, provide as many boxes as there are cats in the house—plus one. For example, if you have two cats, there should be three litter boxes. This decreases competition and gives each cat a box of his or her own.

### **How can I stop my cat from spraying?**

Because spraying is different than other types of house soiling, different tactics are necessary to manage it. First, because there are often hormonal components to spraying, any intact animal should be neutered or spayed. Next, identify the stimuli that cause your cat to spray. If outside cats are responsible, motion detectors that trigger sprinklers can be used to deter them from coming onto your property. Additionally, you can discourage your cat from looking outside by closing blinds or shades, or by placing double-sided tape.

Address possible sources of frustration that may be causing your cat to spray. For example, introduce a new diet gradually, or discontinue it until the spraying is under control. Increasing the amount of playtime for an under-stimulated cat may also help ease frustration.

Spraying can also result from territorial disputes between cats in the same household. They may need to be separated and reintroduced slowly, using food treats to reward and encourage peaceful behavior.

Applying odor neutralizers anywhere your cat has sprayed may prevent him from spraying there again. Another useful commercial product is Feliway®, a synthetic pheromone that, when applied to household surfaces, mimics the scent of cat cheek gland secretions. Many cats will not spray on areas that have this scent. (See the end of this brochure for information on where to purchase the above-mentioned products.) You can find this at the Kauai Humane Society.

### **Will medications stop my cat from house soiling?**

Spraying is more responsive to anti-anxiety drugs than other types of house soiling. However, medication is only part of the solution, and must be used in conjunction with environmental changes. Any medication can have potentially damaging and/or unwanted side effects, and not all cats are good candidates. Cats placed on long-term medication must be monitored closely by a veterinarian.

What can I use to clean my cat-soiled carpet, couch, and other household items?

Cats will re-soil and spray areas previously impregnated with their scent. Therefore, cleaning up your cat-soiled belongings is important, not only to undo the damage, but to break the cycle of elimination. Because it is much easier to eliminate odors in recently-soiled areas, clean them as soon as possible. A cat's sense of smell is far keener than ours; therefore odors must be neutralized, not just deodorized. Lemon juice is a great instructional item for cats. The smell is unpleasant for most cats. You can soak a cotton ball in lemon juice and put it near an area where your cat urinates - besides the litter box - to teach your cat that he or she should not relieve himself or herself in that area. If you want to keep the cotton ball there for an extended period of time or if it's in a hard to reach spot, simply put the cotton ball in a lidded tea strainer. You should be able to hang the strainer near the area to keep kitty away. However, avoid cleaning products containing ammonia or vinegar—they smell like urine and can be irritating. Products like "Nature's Miracle" and "Anti Icky Poo" work well in eliminating urine smell.

### **What other methods should I consider?**

- Sheets of plastic, newspaper, or sandpaper, electronic mats that deliver harmless, mild shocks, or a carpet runner with the nubs facing up may all discourage your cat from entering a soil-prone area.
- Try changing the significance of a soiled area. Cats prefer to eat and eliminate in separate areas, so try placing food bowls and treats in previously soiled areas. Playing with your cat in that space and leaving toys there may also be helpful. Cats always enjoy catnip as well.
- Try denying your cat access to a given area by closing doors, or by covering the area with furniture or plants. Baby gates will not keep a cat out of a room.
- Catch him in the act. A bell on a breakaway collar tells you his whereabouts. If you can catch him within the first seconds of his elimination routine, startle him with a water gun or shake a jar of pennies, so that he associates being startled with those actions. It is important that you startle rather than scare him; fear will only worsen the problem. Moreover, if you catch him after he's eliminated, your window of opportunity is gone—you must catch him just as he's about to eliminate.
- Never hit, kick, or scream at a cat. Not only does this create more anxiety, which may contribute to house soiling behavior, but also such tactics provide no link between the "crime" and the punishment. Some owners resort to rubbing their cat's face in their excrement to "teach the cat a lesson." This is completely ineffective, first because cats do not view their urine and feces as distasteful, and second, because even moments

later, cats cannot make the connection between the mess on the bed and this kind of punishment.

### **Conclusion**

A common and frustrating problem, inappropriate elimination can be difficult to control. A full resolution depends on early intervention, followed by detective work to determine the cause of the behavior, and time and effort on your part to solve the problem. In partnership with veterinarians, both cats and the people who love them can live in harmony and good health.

### **Helpful hints for preventing litter box problems**

#### 1. Choosing an appropriate litter and box

- Most cats prefer unscented, finer-textured litter, at a depth of one to two inches.
- Young kittens, elderly cats, and cats with mobility problems need boxes with low sides.
- Overweight and large cats need bigger boxes.
- Most cats prefer an uncovered box that lets odors escape and allows a 360-degree view of their surroundings.
- Have as many litter boxes as cats in the house-plus one.

#### 2. Choosing a good litter box location

- Most cats prefer a location that is quiet, private, separate from their feeding area, and easily accessible 24 hours a day.
- Do not locate the litter box up or down stairs if your cat has trouble climbing.
- Place multiple boxes in different areas of the house.

#### 3. Keeping the box clean

- If you use clumping litter, remove feces and clumps daily and add clean litter as needed.
- A liner may help keep the box cleaner, but many cats don't like them.
- To clean the box, scrub it with a gentle detergent, dry it, and refill with clean litter. Litter should be changed often enough so that it looks and smells dry and clean. The more cats using the box, the more often this will need to be done.
- Replace old boxes that smell or are cracked.
